# Secure DNS

## Enhanced threat protection

FAST & SIMPLE

## Secure DNS Benefits

- Significantly raise your security level with minimal impact on your existing IT setup
- Protect your most vulnerable infrastructure
- Minimise your administrative costs
- Complies with ISO standards
- Prevent lost revenue, lost intellectual property, and lost productivity
- Updated 24/7 with the latest threat intelligence
- Best protection/investment ratio

"It used to take days between knowledge of a threat to actual protection against it. **We now use Secure DNS to make that process a whole lot faster.**"

THOMAS KAABER

IT Manager at Bang & Olufsen

**It takes awareness, focus & expertise** to make so much threat intelligence available so quickly and easily.

# The most comprehensive phishing and malware intelligence available in a gateway product.

Secure DNS is a network-based, intelligence-driven internet traffic protection system with the most comprehensive phishing and malware intelligence available in a gateway product, and is delivered as SaaS.

Updated with around 70,000 new malicious domains every day, the system draws upon our security analysts' extensive surveillance of hacker groups, botnets, drop-data sites, domain generation algorithms and malicious command & control servers.

## Anycast locations used by Secure DNS

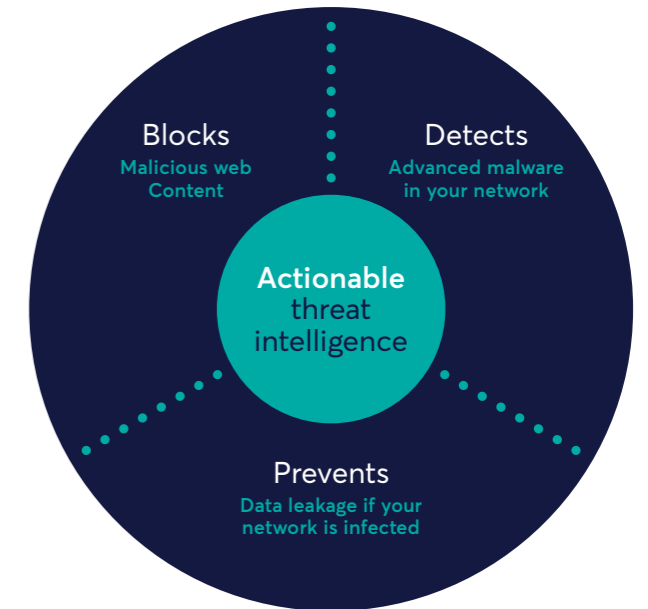

Secure DNS is provided globally through a secure Anycast network addressing and routing methodology.

# Secure DNS Actionable Intelligence

## KEY FEATURES

- Add an extra layer through strong, actionable intelligence
- Detect advanced malware in your network
- Block malicious web content
- Prevent data leakage if your network is infected
- Implement in less than 15 minutes
- Instantly trace Infections to specific users and end points

**"Start collecting data. Now...  
Log all DNS web-proxy requests  
and invest in solutions that will help  
you ingest and analyse this data."**

VERIZON 2015  
Data Breach Investigations Report

## Reduce your security risk

A small configuration change in the Internet-facing DNS servers of your organisation is all that's needed. You retain your existing DNS infrastructure and avoid a painful rip and replace experience.

### YOUR CHOICE OF 3 EDITIONS

Secure DNS options	Basic	Plus	Managed
Detect & block web based threats	•	•	•
Network based malware & APT detection	•	•	•
Data leakage prevention	•	•	•
Hosted service - No servers or client software	•	•	•
Supports all servers, desktops & mobile devices	•	•	•
Basic statistics	•	•	•
Full statistics & forensics, including NAT IP-addresses		•	•
Secure DNS in passive/IDS mode		•	•
Real-time malware, data-leakage & APT alerts			•
Expert analysis & alerts from CSIS Research & Intelligence			•

#### \*For Secure DNS Plus and Managed Secure DNS

A small log forwarder is installed on client-facing DNS servers.

## CSIS Secure DNS

### MORE FEATURES

#### Fast and easy implementation

- Subscription model, no initial investment needed.
- Continuous updates with no administration or maintenance.
- Fully hosted - no downtime, no service interruptions.
- No software installation\*, configuration changes or server reboots needed.
- Automatically covers all computers and devices in your network.

#### 30 day trial available.

- Designed for strict eDNS compliance.
- Web-based administration interface.
- Low-maintenance, streamlined and standards-based.
- Incidents categorised using the ITIL framework.
- Employee privacy protected (only malicious data logged in detail).
- Suitable for small, medium or large organisations.
