

Mimecast D1 Compliance Security

Cloud-based email security and compliance service that reduces complexity and helps to enforce compliance and data leakage.

Mimecast D1 compliance security is a comprehensive cloud-based email security and compliance solution. Mimecast's massively scalable mail transfer agent (MTA) allows you to solve your most complex regulatory and compliance problems, as well as deploy content control and data leak prevention to email.

Granular and flexible email content and secure communication policies can be created and applied to outbound traffic in real-time, enabling you to take responsive data leak prevention (DLP) measures.

How it works

Simple to deploy, simple to manage

- Switch corporate MX records to point to the Mimecast platform.
- Route all outbound traffic through the Mimecast platform.
- Policy-based email content, attachment and image filtering performed.
- Messages that trigger a policy are held in a queue for optional review and release.
- Secure delivery methods invoked based on message content, sender, or recipient rules.
- Real time DLP protection against leaks of confidential or sensitive information.
- Identify confidential files through the use of cryptographic checksums, structured data and compliance libraries.
- Strip document metadata and apply watermarks to Microsoft Office files.
- Convert Microsoft Office files to PDF or ODF automatically as part of email delivery.

Mimecast Compliance Security Compliance security for email

Mimecast D1 Compliance Security is an email security package that works in conjunction with the S1 Advanced Threat Security package, to deliver additional regulatory compliance controls and email content inspection. Optional additions, such as Mimecast Secure Messaging and Mimecast Large File Send can also be added to give additional security and capabilities.

KEY BENEFITS:

- Makes compliance controls simple to deploy and manage.
- Support governance and compliance objectives to help meet regulations including PCI-DSS, HIPAA and GLBA.
- Allows speedy roll-out of data leak prevention.
- Administrators can easily detect sensitive or confidential information in emails.
- Respond to compliance requirements quickly with granular content and DLP policy controls.
- Employees can control administrator defined policies within Outlook.
- Remove risk of document metadata (comments, track changes etc...) leakage.
- Convert Office documents to externally shareable formats such as PDF and ODF.
- Document watermarking for compliance. Centrally control and apply document watermarks with simple policies.

Increased functionality

The additional functionality offered by Mimecast D1 Compliance Security allows you to support governance and compliance objectives with Data Leak Prevention (DLP) and email compliance policies to help meet regulations including PCI-DSS, HIPAA and GLBA.

DLP provides a granular set of controls that can be used to detect and react to sensitive and confidential information contained in emails and their attachments, delivering real-time protection against leaks by email. Policies can be configured in many ways, using tools such as cryptographic functions and regular expressions.

When combined with Mimecast's other email security tools, D1 Compliance Security will provide secure messaging and email encryption policies to ensure any sensitive or confidential information can be protected in transit too. Email encryption allows your employees to send secure emails to clients, contacts and customers without fear of breaching any regulatory or compliance policies.

End user self-service

End users can manage their own compliance controls too, with Mimecast for Outlook. Administrator defined DLP, encryption and document conversion policies can be given to end users directly within Outlook. Allowing end users to own their compliance choices for individual emails.

Mimecast Email Compliance - Key Features

Secure Email Gateway

MimeOS cloud security platform
Centrally administered via single, web-based administration console
Mimecast Personal Portal for user access
Scalable, multi-tenant cloud infrastructure backed by 100% service availability SLA
Automated synchronization with company Active Directory for policy and access control
Monitoring dashboard for email queues and services, with SMS and email alerting
Advanced routing capability, supporting real-time view of all SMTP connections and rejections.
Detailed transmission data for every email that is processed by Mimecast

Data leak prevention capabilities
File and document fuzzy hash fingerprinting to detect partial content matches
Content examination of email body text, attachments, HTML, email headers and subject
Weighted dictionaries for threshold policy triggering and intelligent recognition of structured data. e.g. credit card numbers
Immediate enforcement of email security and DLP policies and the ability to block, hold pending review or bcc a group
Metadata stripping and PDF to remove the risk of leaked Office document metadata, e.g. tracked changes, comments etc
Met Email encryption with best-effort and policy-enforced TLS
Secure Messaging, enables simple and secure email delivery from Outlook or Mimecast Personal Portal and mobile devices
Mimecast managed dictionaries, for Credit Card regular expressions and profanity lists
Complete trigger control of content policy and dictionary content with weightings and thresholds for content
Convert Microsoft Office files to PDF/ODF as part of email delivery
Granular policy application with date specific policies or automated through active directory or group membership
Fully integrated with other Mimecast security services, such as S1 Advanced Threat Security
Expandable with Mimecast Secure Messaging and Large File Send optional add-ons
Email stationery management and marketing tools
Flexible, policy-based signature and legal notice creation and application for corporate branding and image control

Make Email Safer for Business

Mimecast integrated service bundles deliver the ultimate in cyber security, resiliency and archiving. Get comprehensive risk management or address specific requirements - all in a single platform.
